

# Corn Snake

**Origin:** Southeastern & central US

**Size:** 4-6 feet long (full size in 2-3 years)

**Life Span:** 20+ years with proper care

## Heat and Lighting:

- Warm side 80-85 F, cool side 70-75 F, ambient night temperature 70- 75 F
- Use an under-tank heater to provide warmth both day and night
- Can use a light on top of the tank to add warmth during the day and turn off at night to cool down.
- A red heat lamp on top of the screen can be used to supplement heat in drafty areas, but is not necessary if the room is consistently warm.

## Tank setup:

- A 10-20 gallon tank is recommended; you can upgrade your tank size as the snake grows.
- Use aspen or reptile bark substrate, paper towels and newspaper are also options.
- Provide a hiding area on both the warm and cool side and a branch or décor for them to climb on.
- Provide a hide box filled with moist moss to assist with shedding properly.

## Water and Humidity:

- Water should be available at all times, and cleaned regularly.
- The tank should be dry except for the moss box to keep humidity low.
- Humidity levels of 40-50% is optimal

## Temperament & Handling:

 Active but gentle and easily tamed!

- Hatchlings can be nervous and defensive, and it is normal for them to flee.
- Give your snake some time to settle in before handling.
- Handle your snake calmly and confidently so that he/she feels safe.

**Shedding:** As your snake gets ready to shed, their eyes will turn a milky blue/grey and their skin will dull in color and develop a whitish sheen. Avoid handling if possible during this time.

## Diet:

- Feed hatchlings and juveniles once per week; adolescents and adults can be feed biweekly • Corn snakes happily eat thawed (previously frozen) mice. Soak a mouse in hot tap water (never boiling) until soft.
- It is recommended that you feed your snake outside of its enclosure – such as in a plastic box/bin. This teaches the snake to associate the plastic bin with feeding and aggression, and their home with calmness.
- Simply hold the mouse with tongs in front of the head of the snake, shaking gently until it strikes and grabs the rodent. Never jerk the food away.
- Avoid handling (besides moving back to tank) after feeding, at least until the next day.

## Cornsnake Feeding Chart

Corn Snake Weight	Feeder Mouse Size	Days Between Feeding
<15g	Extra Small Pinky	4 days
16-24g	Large Pinky	5 days
25-30g	Small Fuzzy	5 days
31-40g	Large Fuzzy	6 days
41-80g	Small Mouse	6 days
81-140g	Small/ Medium mouse	7 days
151-300g	Medium adult mouse	10 days
Non-breeding Adults	Medium-Large adult mouse	12-14 days
